PATIENT EXPERIENCE REVIEW · HSF-2026-0016 · NOVEMBER 10, 2026

Ean Kleiger, DDS Family & Cosmetic Dentistry

While Ean Kleiger, DDS Family & Cosmetic Dentistry has an established clinical reputation, the current website leaves prospective patients without several key decision-making tools on mobile and desktop.

MOBILE SCORE	LOAD TIME	KEY PAGES REVIEWED	ISSUES FOUND

HOW THIS WAS MEASURED — Visual review of the 4 pages that matter most to a patient's decision — Home · About · Services · Contact — captured at real phone and desktop sizes and reviewed on November 10, 2026.

Performance, Accessibility, Best Practices and SEO scores come from Google's own mobile performance test (Google Lighthouse / PageSpeed Insights).

WHERE FIRST-TIME PATIENTS HESITATE

FINDING 01 — Homepage - Mobile

Opening mobile screen requires scrolling before clear clinical differentiation appears

On a phone screen, the opening section relies on a conventional layout that does not immediately foreground the doctor's credentials, patient stories, and direct scheduling action in one unified view.

> WHY IT MATTERS FOR PATIENT CONFIDENCE — OUR ASSESSMENT
>
> Prospective patients comparing multiple practices on their phones decide within seconds whether a practice feels personal and modern.

FINDING 02 — Homepage & Contact Page

No direct real-time appointment scheduling on the site

Visitors who are ready to schedule an appointment cannot pick a time slot directly online and are instead routed to a static request form or phone-only prompt.

> WHY IT MATTERS FOR PATIENT CONFIDENCE — OUR ASSESSMENT
>
> High-intent patients browsing after office hours frequently choose a competing practice that confirms an appointment immediately.

Google Lighthouse, mobile — measured 2026-11-09: Performance 44 · Accessibility 85 · Best Practices 79 · SEO 89

THE VERDICT

On a phone this site scored 44/100 in Google's mobile performance test and took 35.6s to show its main content. Those figures are measured. Google rates anything over 4 seconds as slow; in its test your homepage took 35.6 seconds — about 9 times that. What slow loading costs in visitors is an estimate: when a mobile page takes that long to appear, prospective patients often leave before the front desk ever knows they looked you up. Because we do not have your internal traffic data, we do not put a number on it. Across the key pages we reviewed, we also confirmed 2 presentation and booking issues that affect how a first-time visitor reads the site.

Before booking a high-trust cosmetic or restorative consultation — even after a personal referral — prospective patients privately judge the practice on their phone. When a site makes it effortless to see clinical proof and request a visit, it gives them one less reason to hesitate or compare another office. The core takeaway of this review is simple: your current website undersells the caliber of clinical care your practice delivers in the chair. Because your internal inquiry numbers are private, this is a directional assessment of patient first impressions, not a claim of measured traffic loss.

NEXT STEP — Prepared for Ean Kleiger, DDS Family & Cosmetic Dentistry. If you would like to see how we resolve these friction points in a working custom preview tailored to your practice, simply reply to the note that accompanied this review. Everything is shared in writing — no sales call required.

This review is based on publicly visible pages and on Google's own performance data. We do not have access to your practice's private analytics, ad spend, or actual patient booking rates. Our observations reflect what a prospective patient sees on a modern mobile device, not an assessment of your clinical care.
