DESIGN & CONVERSION REVIEW · HSF-2026-0012 · NOVEMBER 10, 2026

Call Us Today (510) 251-1962

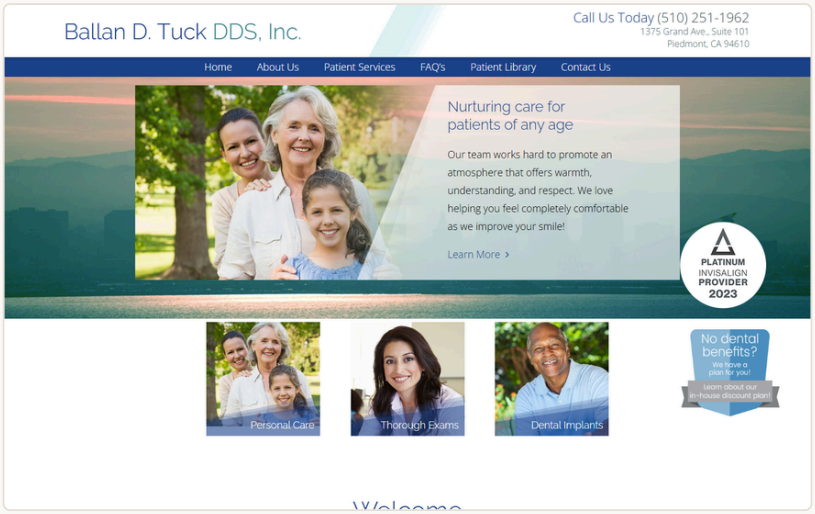

While Ballan D. Tuck, DMD has an established clinical reputation, the current website leaves prospective patients without several key decision-making tools on mobile and desktop.

4 of 6	4	4
2026 STANDARD	KEY PAGES REVIEWED (VISUAL)	ISSUES FOUND

FROM YOUR SITE — MOBILE

FROM YOUR SITE — DESKTOP

HOW THIS WAS MEASURED — Visual review of the 4 pages that matter most to a patient's decision — Home · Contact Us · About Us · Meet The Team — captured at real phone and desktop sizes and reviewed on November 10, 2026.

Performance, Accessibility, Best Practices and SEO scores come from Google's own mobile performance test (Google Lighthouse / PageSpeed Insights).

The 2026 Standard is a fixed checklist of yes/no facts looked for in the pages we loaded.

WHERE FIRST-TIME PATIENTS HESITATE

FINDING 01 — Homepage & Contact Page

No direct real-time appointment scheduling on the site

Visitors who are ready to schedule an appointment cannot pick a time slot directly online and are instead routed to a static request form or phone-only prompt.

> WHY IT MATTERS FOR PATIENT CONFIDENCE — OUR ASSESSMENT
>
> High-intent patients browsing after office hours frequently choose a competing practice that confirms an appointment immediately.

FINDING 02 — Homepage & Services Pages

No clinical before-and-after smile gallery found on key pages

The reviewed pages present cosmetic and restorative treatments in text without showing real patient before-and-after case photography.

> WHY IT MATTERS FOR PATIENT CONFIDENCE — OUR ASSESSMENT
>
> Prospective cosmetic and implant patients look for visual proof of clinical craftsmanship before committing to a consultation.

FINDING 03 — Homepage & Treatment Pages

Patient reviews are not prominently integrated into treatment pages

While the practice has strong external reputation, verified patient stories are not woven directly alongside the treatment descriptions where patients make decisions.

> WHY IT MATTERS FOR PATIENT CONFIDENCE — OUR ASSESSMENT
>
> Visitors have to leave the website to verify social proof on third-party directories, risking distraction and drop-off.

FINDING 04 — Homepage & About Page

No doctor introduction or practice walkthrough video

First-time visitors cannot see or hear the doctor or preview the clinical environment through video before stepping into the office.

> WHY IT MATTERS FOR PATIENT CONFIDENCE — OUR ASSESSMENT
>
> Video introductions significantly reduce dental anxiety and build immediate personal rapport before the first visit.

Patient can pick a time themselves	✗	Visitors can only call — there is no way to see open times or request an appointment online.
Tap-to-call button in the first mobile screen	✓	Tap-to-call phone button in the header of the mobile homepage
Before/after gallery	✗	No before/after gallery or results page found on 4 pages or in the site menu
Patient reviews on the site	not verified	could not be confirmed automatically — not counted
Financing, membership or pricing information	not verified	could not be confirmed automatically — not counted
Mobile layout fits a phone screen cleanly	✓	The page fits a phone screen without sideways scrolling
Secure connection (HTTPS)	✓	Secure, encrypted browser connection
Practice profile structured for Google search	✓	Verified dental practice profile data on the homepage

Each line is a yes/no fact from the pages we loaded for this checklist, with where it was found. A ✗ means we checked (4 pages loaded for this checklist) and the item was not found or did not work. Items marked "not verified" could not be confirmed and are not counted.

Google Lighthouse, mobile — measured 2026-11-09: Performance 89 · Accessibility 84 · Best Practices 79 · SEO 88

THE VERDICT

On a phone this site scored 89/100 in Google's mobile performance test and took 3.3s to show its main content. Those figures are measured. Speed is not the issue here. What the pages above show is about presentation and what the site offers a visitor — our observations from the pages we loaded, not data about your visitors.

Before booking a high-trust cosmetic or restorative consultation — even after a personal referral — prospective patients privately judge the practice on their phone. When a site makes it effortless to see clinical proof and request a visit, it gives them one less reason to hesitate or compare another office. The core takeaway of this review is simple: your current website undersells the caliber of clinical care your practice delivers in the chair. Because your internal inquiry numbers are private, this is a directional assessment of patient first impressions, not a claim of measured traffic loss.

NEXT STEP — Prepared for Call Us Today (510) 251-1962. If you would like to see how we resolve these friction points in a working custom preview tailored to your practice, simply reply to the note that accompanied this review. Everything is shared in writing — no sales call required.

This review is based on publicly visible pages and on Google's own performance data. We do not have access to your practice's private analytics, ad spend, or actual patient booking rates. Our observations reflect what a prospective patient sees on a modern mobile device, not an assessment of your clinical care.
