PATIENT EXPERIENCE REVIEW · HSF-2026-0008 · NOVEMBER 10, 2026

Westlake Smile Studio

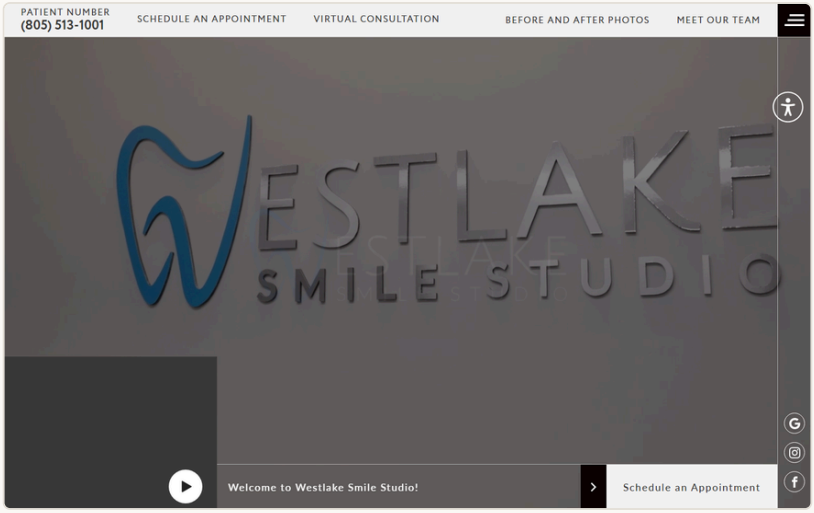

While Westlake Smile Studio has an established clinical reputation, the current website leaves prospective patients without several key decision-making tools on mobile and desktop.

2026 STANDARD	MOBILE SCORE	LOAD TIME	KEY PAGES REVIEWED (VISUAL)	ISSUES FOUND

FROM YOUR SITE — MOBILE

FROM YOUR SITE — DESKTOP

HOW THIS WAS MEASURED — Visual review of the 8 pages that matter most to a patient's decision — Home · Before And After Photos · Patient Stories · Insurance And Financing · Contact Us · About Us · Dental Video Library · Meet The Team — captured at real phone and desktop sizes and reviewed on November 10, 2026.

Performance, Accessibility, Best Practices and SEO scores come from Google's own mobile performance test (Google Lighthouse / PageSpeed Insights).

The 2026 Standard is a fixed checklist of yes/no facts looked for in the pages we loaded. Alongside the 8-page visual review above, this checklist verified 9 pages where scheduling, galleries, reviews, and financing typically live.

WHERE FIRST-TIME PATIENTS HESITATE

FINDING 01 — Homepage - Mobile

Opening mobile screen requires scrolling before clear clinical differentiation appears

On a phone screen, the opening section relies on a conventional layout that does not immediately foreground the doctor's credentials, patient stories, and direct scheduling action in one unified view.

> WHY IT MATTERS FOR PATIENT CONFIDENCE — OUR ASSESSMENT
>
> Prospective patients comparing multiple practices on their phones decide within seconds whether a practice feels personal and modern.

FINDING 02 — Homepage & Contact Page

No direct real-time appointment scheduling on the site

Visitors who are ready to schedule an appointment cannot pick a time slot directly online and are instead routed to a static request form or phone-only prompt.

> WHY IT MATTERS FOR PATIENT CONFIDENCE — OUR ASSESSMENT
>
> High-intent patients browsing after office hours frequently choose a competing practice that confirms an appointment immediately.

THE 2026 STANDARD — WHAT PATIENTS NOW SEE ON PREMIUM PRACTICE SITES

Patient can pick a time themselves	✓	“SCHEDULE AN APPOINTMENT” opens an online scheduling page on www.patientsreach.com (from the homepage)
Tap-to-call button in the first mobile screen	✓	Tap-to-call phone button in the header of the mobile homepage
Before/after gallery	✓	“before and after” gallery available on the site
Patient reviews on the site	✓	“PATIENT STORIES - WESTLAKE VILLAGE, CA” section on the Patient Stories page
Financing, membership or pricing information	✓	Dedicated “financing” page on the site
Mobile layout fits a phone screen cleanly	✓	The page fits a phone screen without sideways scrolling
Secure connection (HTTPS)	✓	Secure, encrypted browser connection
Practice profile structured for Google search	✓	Verified dental practice profile data on the homepage

Each line is a yes/no fact from the pages we loaded for this checklist, with where it was found. A ✗ means we checked (9 pages loaded for this checklist) and the item was not found or did not work. Items marked "not verified" could not be confirmed and are not counted.

Google Lighthouse, mobile — measured 2026-11-09: Performance 43 · Accessibility 84 · Best Practices 79 · SEO 88

THE VERDICT

On a phone this site scored 43/100 in Google's mobile performance test and took 17.3s to show its main content. Those figures are measured. Google rates anything over 4 seconds as slow; in its test your homepage took 17.3 seconds — about 4 times that. What slow loading costs in visitors is an estimate: when a mobile page takes that long to appear, prospective patients often leave before the front desk ever knows they looked you up. Because we do not have your internal traffic data, we do not put a number on it. Across the key pages we reviewed, we also confirmed 2 presentation and booking issues that affect how a first-time visitor reads the site.

8 of 8 items on the 2026 Standard are present — by that measure this practice is not behind. What remains is how the site presents itself to a first-time visitor, not what it offers a patient once they call. That is what carries the argument in this review, not the checklist.

Before booking a high-trust cosmetic or restorative consultation — even after a personal referral — prospective patients privately judge the practice on their phone. When a site makes it effortless to see clinical proof and request a visit, it gives them one less reason to hesitate or compare another office. The core takeaway of this review is simple: your current website undersells the caliber of clinical care your practice delivers in the chair. Because your internal inquiry numbers are private, this is a directional assessment of patient first impressions, not a claim of measured traffic loss.

NEXT STEP — Prepared for Westlake Smile Studio. If you would like to see how we resolve these friction points in a working custom preview tailored to your practice, simply reply to the note that accompanied this review. Everything is shared in writing — no sales call required.

This review is based on publicly visible pages and on Google's own performance data. We do not have access to your practice's private analytics, ad spend, or actual patient booking rates. Our observations reflect what a prospective patient sees on a modern mobile device, not an assessment of your clinical care.
