PATIENT EXPERIENCE REVIEW · HSF-2026-0005 · NOVEMBER 09, 2026

Transcendentist

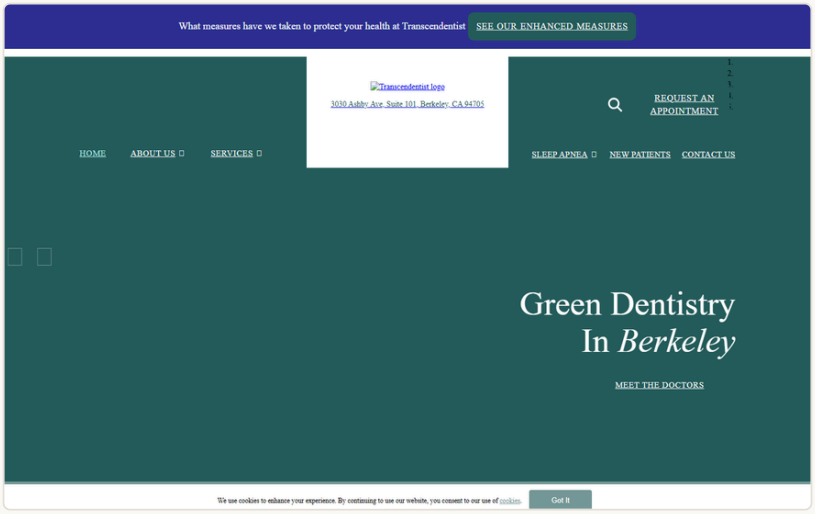

While Transcendentist has an established clinical reputation, the current website leaves prospective patients without several key decision-making tools on mobile and desktop.

6 of 8	100	4.6s	9	3
2026 STANDARD	MOBILE SCORE	LOAD TIME	KEY PAGES REVIEWED (VISUAL)	ISSUES FOUND

FROM YOUR SITE — MOBILE

FROM YOUR SITE — DESKTOP

HOW THIS WAS MEASURED — Visual review of the 9 pages that matter most to a patient's decision — Home · Appointment · Smile Gallery · Success Stories · Cherry Financing · Contact Us · Meet The Transcendentist Dentist · Transcendentist Office Tour · Beauty Wellness Transformation B — captured at real phone and desktop sizes and reviewed on November 09, 2026.

Performance, Accessibility, Best Practices and SEO scores come from Google's own mobile performance test (Google Lighthouse / PageSpeed Insights).

The 2026 Standard is a fixed checklist of yes/no facts looked for in the pages we loaded.

WHERE FIRST-TIME PATIENTS HESITATE

FINDING 01 — Homepage & Contact Page

No direct real-time appointment scheduling on the site

Visitors who are ready to schedule an appointment cannot pick a time slot directly online and are instead routed to a static request form or phone-only prompt.

> WHY IT MATTERS FOR PATIENT CONFIDENCE — OUR ASSESSMENT
>
> High-intent patients browsing after office hours frequently choose a competing practice that confirms an appointment immediately.

FINDING 02 — Homepage - Mobile

Phone number is not a one-tap action button in the opening mobile screen

On a phone screen, a visitor cannot immediately tap a prominent call button in the opening section without scrolling or opening the navigation menu.

> WHY IT MATTERS FOR PATIENT CONFIDENCE — OUR ASSESSMENT
>
> Creates unnecessary friction for mobile visitors who want to call the front desk right away.

FINDING 03 — Homepage & About Page

No doctor introduction or practice walkthrough video

First-time visitors cannot see or hear the doctor or preview the clinical environment through video before stepping into the office.

> WHY IT MATTERS FOR PATIENT CONFIDENCE — OUR ASSESSMENT
>
> Video introductions significantly reduce dental anxiety and build immediate personal rapport before the first visit.

Patient can pick a time themselves	✗	Visitors can request an appointment (on the homepage), but cannot see open times or book one themselves — a staff member has to follow up.
Tap-to-call button in the first mobile screen	✗	The phone number is a tap-to-call button only further down the mobile homepage, not on the first screen
Before/after gallery	✓	“Smile Gallery” gallery available on the site
Patient reviews on the site	✓	“Real Reviews From Real People” section on the Success Stories page
Financing, membership or pricing information	✓	Cherry patient financing (on the Cherry Financing page)
Mobile layout fits a phone screen cleanly	✓	The page fits a phone screen without sideways scrolling
Secure connection (HTTPS)	✓	Secure, encrypted browser connection
Practice profile structured for Google search	✓	Verified dental practice profile data on the homepage

Each line is a yes/no fact from the pages we loaded for this checklist, with where it was found. A ✗ means we checked (9 pages loaded for this checklist) and the item was not found or did not work. Items marked "not verified" could not be confirmed and are not counted.

Google Lighthouse, mobile — measured 2026-11-09: Performance 100 · Accessibility 84 · Best Practices 79 · SEO 88

THE VERDICT

On a phone this site scored 100/100 in Google's mobile performance test and took 4.6s to show its main content. Those figures are measured. Google rates anything over 4 seconds as slow; in its test your homepage took 4.6 seconds — more than that. What slow loading costs in visitors is an estimate: when a mobile page takes that long to appear, prospective patients often leave before the front desk ever knows they looked you up. Because we do not have your internal traffic data, we do not put a number on it. Across the key pages we reviewed, we also confirmed 3 presentation and booking issues that affect how a first-time visitor reads the site.

Before booking a high-trust cosmetic or restorative consultation — even after a personal referral — prospective patients privately judge the practice on their phone. When a site makes it effortless to see clinical proof and request a visit, it gives them one less reason to hesitate or compare another office. The core takeaway of this review is simple: your current website undersells the caliber of clinical care your practice delivers in the chair. Because your internal inquiry numbers are private, this is a directional assessment of patient first impressions, not a claim of measured traffic loss.

NEXT STEP — Prepared for Transcendentist. If you would like to see how we resolve these friction points in a working custom preview tailored to your practice, simply reply to the note that accompanied this review. Everything is shared in writing — no sales call required.

This review is based on publicly visible pages and on Google's own performance data. We do not have access to your practice's private analytics, ad spend, or actual patient booking rates. Our observations reflect what a prospective patient sees on a modern mobile device, not an assessment of your clinical care.
